

## Manage your network and servers from anywhere

Network reliability is not a luxury — outages and system failures hurt the bottom line of every company. At the same time, CTOs, IT managers and network administrators are under pressure to reduce costs and increase efficiency.

Mobile Admin is a complete enterprise solution that enables the unified administration of all servers—including Windows and UNIX—as well as routers and switches, from a handheld device or computer.

"We achieved a quick and measurable return on investment with accelerated response times and reduced network downtime costs from the usage of Mobile Admin. Not to mention the gain of 4 additional man-hours per day, reducing the work day from 12 hours to 8 hours."

- Kerry Kinchen, Sealed Air

### Manage:

- Microsoft Windows
- Microsoft Active Directory and Exchange
- Microsoft DHCP, DNS and IIS
- Microsoft Cluster Servers
- Microsoft SQL Server
- BlackBerry Enterprise Server
- Citrix
- Lotus Domino
- VMware
- Oracle
- Novell
- Veritas (Symantec) Backup Exec
- HP Integrated Lights Out (iLO)
- RSA Authentication Manager
- UNIX and Linux Servers
- Cisco Routers
- AS/400 and iSeries Servers
- IBM mainframes

### Try Mobile Admin

## Minimum System Requirements

### Mobile Admin Server

- 32-bit version of Microsoft Windows 2000 Professional, Windows 2000 Server, Windows XP Professional, Windows 2003 or 2008 operating system, or Windows Vista
- 1 GHz CPU
- 512 MB RAM
- 350 MB free disk space
- Microsoft .NET Framework 2.0
- MS Windows Installer 3.1
- SQL Server, version 2005, or 2005 Express

## Mobile Admin Client

### Web Interface

- Accessible from any computer or laptop with an Internet connection (supported browsers include: Internet Explorer v.6 and 7, or Mozilla Firefox v. 2 and 3)

### BlackBerry Smartphones

- BlackBerry Smartphones with v.4.0.2 OS (or higher)
- at least 800 KB available memory

### Windows Mobile devices

- Pocket PC 2003 or Windows Mobile 5.0 for Pocket PC and Smartphone, or Windows CE .NET 5.0 and higher
- VPN client (recommended, not required)

## How it Works

Mobile Admin is a client-server application. With no agents to install, you can simply install the server software on any computer with network access to all the servers you want to manage.

Mobile Admin is licensed per user. One license allows one user to access and manage an unlimited number of servers

## Accelerated Response, Reduced Downtime

Mobile Admin allows you to perform preventative and corrective network tasks from anywhere. When you can quickly and completely respond to server issues as they occur, you'll minimize downtime costs and protect Service Level Agreements while boosting your competitive advantage in the process.

## Quick and Measurable ROI

Mobile Admin allows you to provide an accelerated response using your existing IT staff and hardware. Your return on investment results from lower server downtime and greater employee productivity.

## Simple Deployment

Mobile Admin is easy to deploy on your servers and handhelds. Our low-cost, flexible licensing model allows you to roll out our network administration platform at the best pace for your business. It takes into account the growing needs of companies that want to expand their network without purchasing additional software licenses.

Each Mobile Admin license allows you to access and manage an unlimited number of servers. Mobile Admin operates on top of your existing system and will not conflict with any existing software or your network security policy.
